BUSSMANN Fuses

FNM SLOW-BLOWING FUSES

Dual element, fibre tube, slow blowing fuses avoid needless blows from starting currents or surges. Fuse link operates only on very high overloads, or short circuits. A thermal cutout functions on low overloads, and cannot operate quickly at any load, hence long time lag is obtained. Yet, complete protection is provided against shorts. 13/32"x1½". SHIELDED ASSEMBLY

Shielded Coil forms provide both electrostatic and elector magnetic shielding and consequently may be placed adjacent to one another with no couplings needed. These rugged, compact units, precision engineered from brass and aluminum. Dielectric withstanding voltage: 100 VRMS. Powdered iron components are moisture proof.

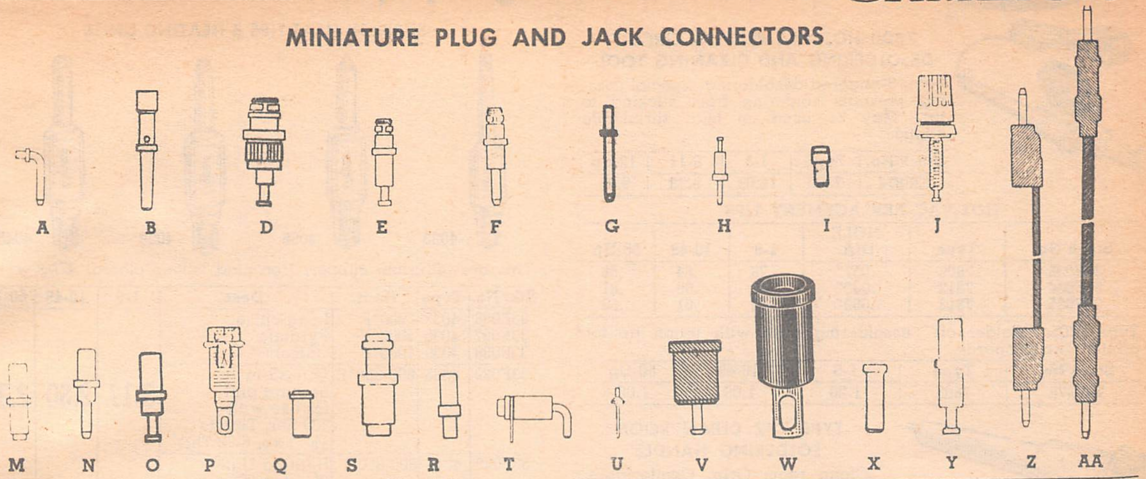
Connectors and Handles CAMBION

MINIATURE PLUG AND JACK CONNECTORS



Wide variety of plugs and jacks make possible tight space-saving connections; offers reliable "pluggability" for individual components. Positive grip, with low contact resistance after many repeated insertions. Plugs (pins) and jacks are available for boards with different thicknesses. Suffix in type number indicates the size available. Order from Board Thickness Chart below adding the proper suffix to Type number for thickness desired.

Example: Type 1521-1 thru 3 is available for boards 1⁄32" thick (1521-1), 1⁄16" thick (1521-2) and 3⁄32" thick (1521-3)

Gold plated except: (†) Electro-solder and (**) Bright Alloy plating. Available with (††) black or red insulation, (‡) black, red or blue wire insulation (#) black, red or white insulation.

LOW VOLTAGE SOLDERING PENCIL

Small, lightweight instruments for close-quarter precision soldering of printed circuits, miniature component parts, semi-conductors, and fine assemblies. Feather weights of 1/4 to 1 ounce virtually eliminate hand fatigue. All Oryx soldering irons utilize a unique element-in-the-tip design principle. Use of this principle enables these irons to provide high efficiency, quick heat recovery. and cool handles. In addition all irons are polarzied, making it possible to directly ground the shaft, tip, and one side of the heating element for maximum safety.

ENERGY RESERVE THRU TEMPERATURE CONTROL

Have a self-contained automatic switching system which is activated when the tip temperature deviates from the preselected level that you set. When tools are idling the heating element is on only as required to maintain the idling temperature. When applied to a load the tool's switching system automatically delivers the level of reserve energy needed.

Permanent magnet is attracted to ferromagnetic insert when tip is cold, activating the power "on" switch. When tip approaches pre-selected temperature the insert loses its magnetic characteristics causing the magnet to retract and turn the switch off. As the tip begins cooling the ferromagnetic insert again attracts magnet to resume the heating process. "Temperature Sensing" tips make the system work!

DYNALOY, INC.

CURED RESIN SOLVENTS

Removes the most commonly used thermosetting plastics, such as epoxy, urethane, silicone, polysulfide, etc. Solvents do the job easily, cleanly and quickly.

DECAP

Removes any cured epoxy; especially transfer molded epoxies. Most effective when used hot (90-150°C). Will not attack metals, but does tarnish silver and tin compounds on prolonged heating.

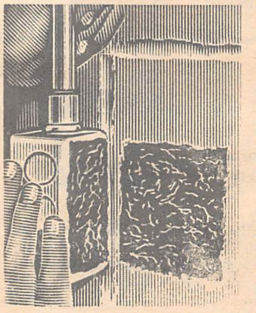
ECCOBOND 285



General purpose black rigid adhesive paste which may be cured with one of three curing agents supplied; Catalyst 24LV — room temp. cure — 30 min. pot life — lowest thixotrophy and viscosity and will soften above 250°F.; Catalyst 9 — room tem. cure — 45 min. pot life — highest thixotrophy and vis cosity may be used up to 300°F; Catalyst 11 — requires oven cure — 4 hr. pot life — high thixotrophy with medium viscosity and may be used up to 350°F continuous duty, with short time exposure to 400°F. When cured produces high strength bond to most materials including metals, glass, ceramics, and most plastics, performs equally well on porous or non-porous surfaces and has excellent resistance to water and chemicals. Coefficient of thermal expansion is much lower than commonally available adhesives. High thermal conductivity. Combination works well to overcome bond failure due to thremal cycling.

SEALANT

LOCTITE
LOCTITE
LOCTITE

Loctite anaerobic compounds are single component resins furnished as liquids which self-harden into tough plastic bonds when confined between close fitting parts. When used with standard fasteners, Loctite will provide shock and vibration proof assemblies superior to mechanical fasteners. The stronger grades will strengthen press fits or will give press fit strength to slip fitted smooth cylindrical parts. When Loctite is used with aluminum parts, plated parts or with thermoset plastic materials, the Locquic Primer is recommended for optimum performance.

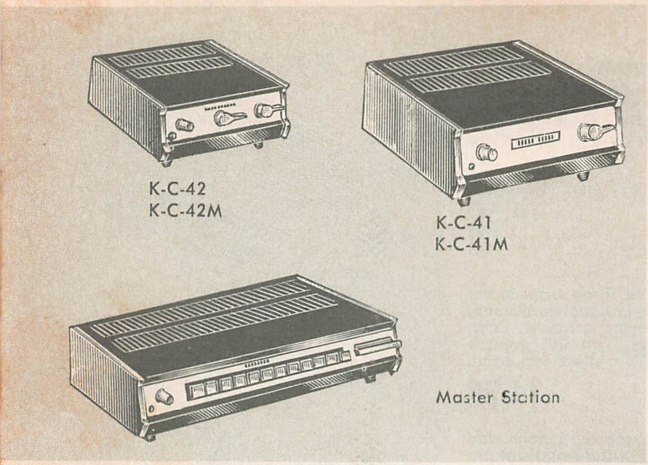
TALK-A-PHONE Intercommunications Systems



"CHIEF" REDI-POWER MASTER STATIONS

"Chief" Redi-Power Master Stations have built-in extra power. This added power (up to 30 watts), gives you the additional volume required when calling a number of stations at one time or calling noisy locations. Satisfies need for power boost without eliminating return speech. Volume is self-compensating whether 2, 6 or 12 stations are called simultaneously. Each station receives its pre-determined volume with no division of output when more stations are called at one time. One or more Redi-Power Masters can be combined with regular Chief Masters and staff stations in same system. Other features include: (1) Incoming call chime. (2) Monitoring signal. (3) Dynasonic selector that permits intermixing of Master and Staff Stations and variation of performance. (4) Volume Control. (5) Noise-free voice range power. (6) Multi-magic station selector which enables selection of up to 30 stations with only 12 push buttons. (7) Uni-trans dictation control. (8) Operation on 120V. AC. (9) External relay control for use in extremely high noise level areas. (10) In modern, custom-designed cabinets. Charcoal gray and brushed chrome. Size 14x8¾x3⅛".

ALL TRANSISTOR INTERCOMS

"CHIEF" MASTER STATIONS

Can be used in any combination—with all Masters—one Master and Staff Stations—or a number of Masters combined with Staff Stations. 6, 12, and 20 Station Masters, together with Staff Stations can be intermixed in same system. Masters can talk with any other Master, as well as with Staffs. Staff Stations can answer all Masters and can orginate calls to one or two "private" Masters, depending upon Staff's capacity. Staff Stations are not connected to electrical outlet.

Exclusive Features: (1) Dynasonic Design enables stations to perform "privately" (so no one can listen in) or "non privately" (for reply without use of controls). The same station can be "private" to one or more Masters and "non private" to others. (2) Monitoring signal visually indicates to a "non private" station that it is being monitored. (3) Busy signal visibly indicates when station you call is "busy". All units have facility to override "busy signal" for important calls. (4) Multi-magic station selector enables selection of up to 30 stations with only 12 push buttons. (5) Uni-trans dictation control. (6) External relay control enables Master to activate external relays for operating siren, gong, light, etc. (7) Reciprocal Power supply—Each Master operating on 120 volts AC only and should be plugged in Where no electrical outlet is available up to 30% of the "Chief" Masters in the system can operate without being plugged in. (8) Noise free voice range power. The exclusive patented circuit enables performance without noise, hum or distortion, when used with talk-a-phone cable. (9) Hi power staff stations and horns. K-HP-3 provides more than twice the volume of universal Staff. K-C-20 provides about 4 times greater volume . . . more with Redi Power Master. (10) Wall switch combines with Talk-a-phone Horn or Hi Power staff to add origination of call feature. (11) Incoming call chime. All "Chief" and "Chief Redi-Power" Master Stations come complete with junction box and built in power supply attached by 6' flexible cable. Master size: 14" width, 3⅛" height, 8¾" depth. For 120 volts AC only. U.L. listed.

HOW TO DETERMINE CABLE REQUIREMENTS

To inter-connect Master Stations, measure from first Master to second Master only, from 2nd to 3rd Master only, etc., until last unit in system is reached and total. For K-C-4920 use two lengths to 6226 Cable. To connect K-C-41, K-C-20, or K-HP-3 Staff Stations, measure from Staff Station to one Master to which Staff Station originates calls. To connect K-C-42 Staff Stations measure separate length of cable from Staff Station to each Master Station to which staff originates calls.
